Audit date: 2026-08-07

Report version: v3

Prepared by Catalyst Solutions Services

Reviewed by Dev Test

Prepared for the business named above. Findings reflect what was publicly observable and what you told us on the audit date — see the methodology section at the end for scope and limitations.

A workable base with clear gaps — analytics & trust needs attention first.

GROWTH READINESS

Search visibility		67	HIGH CONFIDENCE
Content & authority		67	MEDIUM CONFIDENCE
Conversion readiness		67	MEDIUM CONFIDENCE
Analytics & trust		28	MEDIUM CONFIDENCE
AI-search readiness		57	MEDIUM CONFIDENCE
Mobile & speed		67	HIGH CONFIDENCE

Scores are computed from 27 automated checks. A pillar only reaches 100 when every check is independently verified — "detected" signals earn partial credit.

IF YOU ONLY READ ONE THING

- Your acquisition relies entirely on organic interest and direct WhatsApp queries, with no measurement of cost-per-lead or conversion performance.
- Your technical search setup has foundational gaps, including missing H1 header tags and 35 unlabelled images across your core course pages.
- You have no blog or educational content engine to capture informational searches from clinicians researching specialized clinical training.

What we understood

The Medicity delivers advanced clinical training fellowships, diplomas, and specialized medical short courses in Gurugram, India, serving doctors and surgeons seeking hands-on procedural expertise. You came to us looking for a predictable path to more course enrolments through search visibility and paid advertising.

What we checked

27 automated checks, run 2026-08-07. "Detected" means a signal was found but not proven to be working; "Assumed" means we could not verify it without account access.

SEARCH VISIBILITY

✓ robots.txt present	VERIFIED
✓ XML sitemap found	VERIFIED
✓ Canonical tag on homepage	VERIFIED
✓ Homepage title tag length 15–65 characters 60 characters	VERIFIED
✓ Meta description on homepage 197 characters	VERIFIED
✗ All scanned pages have meta descriptions 1 of 4 pages missing	VERIFIED
✓ No duplicate titles across scanned pages	VERIFIED
✗ Exactly one H1 on homepage 0 found	VERIFIED
✗ No broken internal links in sample broken: /xmlrpc.php	VERIFIED

CONTENT & AUTHORITY

✗ Blog or content section	DETECTED
✓ Substantial homepage copy (300+ words) 1013 words	VERIFIED
✓ Multiple key pages reachable 4 pages scanned	VERIFIED

CONVERSION READINESS

✓ Contact form present	VERIFIED
✓ Form length reasonable (≤5 fields) longest form: 4 fields	VERIFIED
✗ Online booking / scheduling link	DETECTED

✓ Open Graph tags

VERIFIED

⊗ Machine-readable page structure (title + meta + H1)

VERIFIED

MOBILE & SPEED

✓ Mobile viewport configured

VERIFIED

✓ Favicon present

VERIFIED

⊗ Images have alt text 35 of 35 homepage images missing alt

VERIFIED

What we found

HIGH IMPACT

You run Google Ads periodically with no fixed budget and rely on WhatsApp and phone enquiries, but you lack cost-per-lead tracking across your acquisition channels.

📈 Businesses that adopt data-driven marketing are roughly 6x more likely to be profitable year-over-year (Forbes/BCG data-driven marketing research)

Source: Your answer during intake: we run Google Ads occasionally with no fixed budget; most enquiries arrive via WhatsApp, phone, and organic search on course pages, and we do not track cost per lead today.

HIGH IMPACT

Your website lacks H1 tag headers across key templates such as the homepage and the Master's in Clinical Fundamentals of Lung Ultrasound and POCUS page, which creates ambiguity for search engine crawlers parsing your primary page topics.

Source: Your homepage and ultrasound course page, checked 2026-08-07 — zero H1 header tags were found on either page.

MEDIUM IMPACT

There are 35 images currently published without alt text attributes across your pages, which misses an opportunity for image search visibility in medical education queries.

Source: Your site scan, checked 2026-08-07 — 35 of 35 homepage images were found missing alt text attributes.

MEDIUM IMPACT

You have a broken internal link pointing to /xmlrpc.php, which can degrade crawl budget efficiency and user experience.

Source: Your site scan, checked 2026-08-07 — a broken internal link reference was detected pointing to /xmlrpc.php.

HIGH IMPACT

Your website contains no blog or structured organic content engine beyond transactional course listing pages, limiting your ability to rank for informational category searches such as minimal access surgery fellowships.

📈 Companies that blog consistently generate 67% more leads per month than those that don't (DemandMetric/HubSpot content research)

Source: Your homepage and course pages, checked 2026-08-07 — no blog or article section exists, and your intake answer confirmed course pages only.

Who you should be targeting

The Practicing Specialist Doctor

Qualified surgeons, gynecologists, urologists, and physicians across India and international markets, aged 30–55, looking to add high-value procedural skills to their private practice or hospital capabilities. They make their own professional development investment, often supported by their hospital partnership. Trigger events include competitor clinics offering laparoscopic or IVF procedures and capturing local referrals, or patient demand for minimally invasive treatments outstripping their current skill set. Their primary objection is ensuring they receive actual hands-on time rather than just watching lectures, and whether they can afford to leave their clinical practice for a fellowship.

The Institutional Hospital Sponsor

Possible routes

ROUTE	EFFORT	DIY- ABLE	TIMELINE (WEEKS, PADDED)
Route A — Technical Cleanup and Conversion Readiness	Medium	✓	4–8 wks
Route B — Paid Acquisition and Content Expansion	Medium	—	8–14 wks

Route A — Technical Cleanup and Conversion Readiness

Medium effort

Partly DIY-able

Fixing fundamental technical SEO errors, adding missing H1 tags, resolving broken internal links, applying image alt text, and setting up proper conversion tracking for course registrations.

Best if: You want to fix foundational technical leaks before investing in new traffic acquisition.

Realistic milestones: Technical audit items and header tags corrected within 3–5 weeks; conversion tracking and image optimizations verified live within 5–7 weeks.

If you do nothing: If you skip this route, any future ad spend or traffic increase will hit pages with broken crawl paths and unmeasured conversion points.

Trade-offs: This route generates no new traffic by itself; it ensures your existing visitors and future campaigns actually convert efficiently.

Route B — Paid Acquisition and Content Expansion

Medium effort

Structuring targeted campaigns for high-intent fellowship searches, building an internal faculty-led content engine, and optimizing landing page funnels for doctors and institutional sponsors.

Best if: You want an active, scalable system to generate predictable course registrations from specialist doctors across India.

Realistic milestones: Campaign structures and initial content calendar established within 4–6 weeks; first four faculty-authored articles and ad campaigns live and calibrating within 8–12 weeks.

If you do nothing: If you do nothing, your reliance on sporadic ad runs and word-of-mouth continues without predictable lead volume.

Trade-offs: Paid campaigns require ongoing budget and close tracking, while organic content takes 3–6+ months to build meaningful search momentum.

⚡ Quick wins — inside 30 days, any route

- 1 Add primary keyword-targeted H1 header tags to your homepage and core course pages.
- 2 Populate missing alt text attributes across all 35 site images to improve image search visibility.
- 3 Remove or fix the broken /xmlrpc.php internal link reference.
- 4 Claim and complete your Google Business Profile to capture local training searches in Gurugram and Delhi NCR.

Assumptions we made

- Assumed that internal medical faculty can dedicate 2–3 hours monthly to review or provide clinical insights for educational content pieces.
- Assumed administrative access is available to modify page templates, H1 tags, and install conversion tracking scripts.

Methodology & limitations

What we reviewed. 4 publicly accessible pages (/ , /fellowship-in-ivf-and-reproductive-course/, /course-calendar/) on 2026-08-07, plus your intake answers.

How scores work. 27 automated checks grouped into 6 pillars. Independently verified checks earn full credit; signals we detected but could not prove working earn 70%; assumptions earn half. No pillar reaches 100 unless everything in it is verified. Each pillar shows a confidence level based on how much of it we could verify.

What we could not verify. Anything requiring account access: analytics configuration and conversion events, Search Console data, ad account performance, actual enquiry volumes. Where these matter, the report says so rather than guessing. Statistics cited come from named published studies; none are generated.

Human review. This report was drafted by an AI analysis pipeline and reviewed, edited where needed, and approved by a named Catalyst consultant before release (Dev Test). Timelines shown are deliberately conservative ranges. Nothing in this report is a guarantee of a business outcome.
